

Question 1: Use yfinance to Extract Stock Data

Using the `Ticker` function enter the ticker symbol of the stock we want to extract data on to create a ticker object. The stock is Tesla and its ticker symbol is `TSLA`.

```
[4] tesla = yf.Ticker("TSLA")
```

✓ 0.0s Python

Using the ticker object and the function `history` extract stock information and save it in a dataframe named `tesla_data`. Set the `period` parameter to `max` so we get information for the maximum amount of time.

```
[5] tesla_data = tesla.history(period='max')
```

✓ 2.7s Python

Reset the index using the `reset_index(inplace=True)` function on the `tesla_data` DataFrame and display the first five rows of the `tesla_data` dataframe using the `head` function. Take a screenshot of the results and code from the beginning of Question 1 to the results below.

```
[6] tesla_data.reset_index(inplace=True)
```

```
tesla_data.head(5)
```

✓ 0.1s Python
